PRACTICAL NO 4

Implement all 20 grains using Pandas methods. The Sample Grains for the Sales Dataset are as:

- Which was the best month for sales? How much was earned that month?
- Which product sold the most? Why do you think it did?
- Which city sold the most products?
- What Products are most often sold together?

CODE:

```
import pandas as pd
df=pd.read_csv('grainsales (1).csv')
print(df)
```

Best Month for the Sale

```

import pandas as pd
df=pd.read_csv('grainsales (1).csv')
mm=df.groupby('Months')['Sales'].sum().idxmax()
tm=df.groupby('Months')['Sales'].sum().max()
print("The best month for the sale is:",mm)
print("Total earning of ",mm,"is:",tm)

```

The best month for the sale is: JULY

Total earning of JULY is: 16000000

Product which is sold most

```

psm=df.GrainName.value_counts()
print("The product which sold most is:",psm)
print("Because total sales of it is: ",psm['Ragi'])

```

The product which sold most is: Ragi 5

Bajra 4

Brown rice 4

Wheat 4

Sooji 3

Corn 3

Oats 2

Sattu 2
